

# CONSEAL A-M 1000

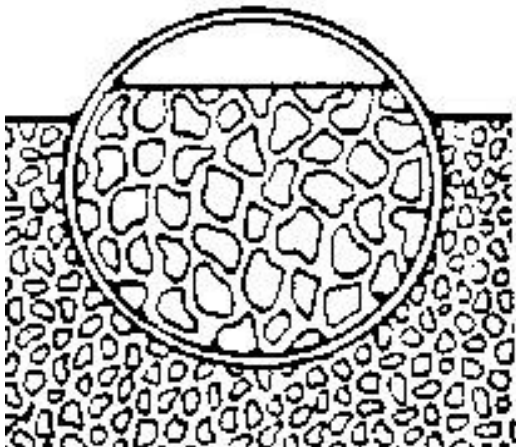

**PENETRATING CONCRETE SEALER WITH ANTI-MICROBIAL**

**DRIES-DECONTAMINATES-DEODORIZES-DEEP SEALS**

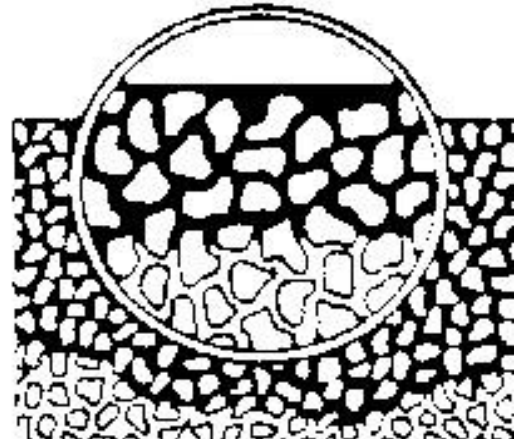

**STOPS MOLD - STOPS MILDEW - STOPS RADON GAS**

The ultimate alkali activated moisture barrier for waterproofing, hardening, dustproofing and preserving new or old concrete

**ENVIRONMENT AND USER FRIENDLY**

Spaces between particles leave untreated concrete subject to penetration by moisture, contaminants, oils, acids, etc.

CONSEAL A-M 1000 penetrates into the concrete where it reacts with free lime and alkali to fill the voids and bond the particles into a solid mass, creating a permanent, integral seal.

## **BONDING**

CONSEAL A-M 1000 eliminates dusting and flaking and prepares the treated surface for paints, caulking compounds, adhesives and floor coverings, and increases the bond and life of these materials. It is coatable and compatible with any type of covering.

## **SEALING**

CONSEAL A-M 1000 permanently seals concrete and other Portland cement based materials into a mass that is essentially solid, rather than porous. Its penetrating quality provides deep sealing that provides an effective internal seal for the life of the concrete.

## **WATERPROOFING**

CONSEAL A-M 1000 becomes an integral permanent part of the concrete by reacting with the free lime and alkali found in all concrete; thus, completely waterproofing and substantially strengthening the structure of the concrete.
